# RF EXPOSURE REPORT

Report No.: 15070087-FCC-H1
Supersede Report No.: N/A

| Applicant             | Changsha SunSky Electronic Design & Development Co., Ltd. |
|-----------------------|---|
| Product Name          | Voting Base Station                                       |
| Model No.             | EA1200  |
| Test Standard         | FCC 2.1091  |
| Test Date             | April 14 to April 29, 2015                                |
| Issue Date            | May 5, 2015   |
| Test Result           | Pass Fail   |
| Equipment compl       | ed with the specification                                 |
| Equipment did no      | t comply with the specification                           |
| Wiky.                 | am Chris You  |

#### **Laboratories Introduction**

SIEMIC, headquartered in the heart of Silicon Valley, with superior facilities in US and Asia, is one of the leading independent testing and certification facilities providing customers with one-stop shop services for Compliance Testing and Global Certifications.

In addition to testing and certification, SIEMIC provides initial design reviews and compliance management throughout a project. Our extensive experience with China, Asia Pacific, North America, European, and International compliance requirements, assures the fastest, most cost effective way to attain regulatory compliance for the global markets.

#### **Accreditations for Conformity Assessment**

| Country/Region | Scope                              |
|----------------|------------------------------------|
| USA            | EMC, RF/Wireless, SAR, Telecom     |
| Canada         | EMC, RF/Wireless, SAR, Telecom     |
| Taiwan         | EMC, RF, Telecom, SAR, Safety      |
| Hong Kong      | RF/Wireless, SAR, Telecom          |
| Australia      | EMC, RF, Telecom, SAR, Safety      |
| Korea          | EMI, EMS, RF, SAR, Telecom, Safety |
| Japan          | EMI, RF/Wireless, SAR, Telecom     |
| Singapore      | EMC, RF, SAR, Telecom              |
| Europe         | EMC, RF, SAR, Telecom, Safety      |

## 4. Equipment under Test (EUT) Information

| Description of EUT: Voting Base Station |
|---|
|---|

Main Model: EA1200

Serial Model: N/A

Date EUT received: April 14, 2015

Antenna Gain: 3.3 dBi

Type of Modulation: GFSK

RF Operating Frequency (ies): 2403-2465 MHz

Input Power: DC 5V Supply by USB Port

Trade Name : SunVote®

FCC ID: WSVSUNVOTEBASE12X

| Test Report | 15070087-FCC-H1 |  |
|-------------|-----------------|--|

## 5. FCC §2.1091 - Radiofrequency radiation exposure evaluation: mobile devices.

#### 5.1 Applicable Standard

According to §1.1307(b)(1), systems operating under the provisions of this section shall be operated in a manner that ensures that the public is not exposed to radio frequency energy level in excess of the Commission's guidelines.

According to §1.1310 and §2.1091 RF exposure is calculated.

Limits for General Population/Uncontrolled Exposure

| Limits for General Population/Uncontrolled Exposure |                                  |                                  |                           |                          |  |  |
|---|----------------------------------|----------------------------------|---------------------------|--------------------------|--|--|
| Frequency Range<br>(MHz)                            | Electric Field<br>Strength (V/m) | Magnetic Field<br>Strength (A/m) | Power Density<br>(mW/cm²) | Averaging Time (minutes) |  |  |
| 0.3-1.34  | 614                              | 1.63                             | *(100)                    | 30                       |  |  |
| 1.34-30   | 824/f                            | 2.19/f                           | *(180/f²)                 | 30                       |  |  |
| 30-300  | 27.5                             | 0.073                            | 0.2                       | 30                       |  |  |
| 300-1500  | /                                | 1                                | f/1500                    | 30                       |  |  |
| 1500-100,000  | 1                                | 1                                | 1.0                       | 30                       |  |  |

f = frequency in MHz

<sup>\* =</sup> Plane-wave equivalent power density

| Page        | 8 of 8          |  |

#### 5.2 Test Result

| Test mode | СН   | Freq (MHz) | Conducted Power (dBm) | Tune Up Power<br>(dBm) |
|-----------|------|------------|-----------------------|------------------------|
| GFSK      | Low  | 2403       | 6.111                 | 5.3±1                  |
|           | Mid  | 2433       | 5.923                 | 5.3±1                  |
|           | High | 2465       | 5.717                 | 5.3±1                  |

Predication of MPE limit at a given distance

$$S = \frac{PG}{4\pi R^2}$$

Where: S = power density (in appropriate units, e.g. mW/cm<sup>2</sup>)

P = power input to the antenna (in appropriate units, e.g., mW).

G = power gain of the antenna in the direction of interest relative to an isotropic radiator, the power gain factor, is normally numeric gain.

R = distance to the center of radiation of the antenna (appropriate units, e.g., cm)

For the antenna manufacturer provide only used limited to ERP/EIRP or radiated spurious emission test. The MPE evaluation as below:

Maximum output power at antenna input terminal: 6.3 (dBm)

Maximum output power at antenna input terminal: 4.27 (mW)

Prediction distance: >20 (cm)

Predication frequency: 2403 (MHz) High frequency

Antenna Gain (typical): 3.3 (dBi)

Antenna Gain (typical): 2.14 (numeric)

The worst case is power density at predication frequency at 20 cm: 0.0018(mW/cm²)

MPE limit for general population exposure at prediction frequency: 1.0 (mW/cm²)

 $0.0018(\text{mW/cm}^2) < 1.0 (\text{mW/cm}^2)$ 

Result: Pass
